DETAILED ACTION

Claims 1-24 are pending in this Office Action.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C 121:

- I. Claims 1-4, are drawn to location dependent services. The speed of the mobile is considered in addition to position in providing the necessary information, classified in class 709, subclass 203.
- II. Claims 5-16, are drawn to anonymity of user. Withholding the user identifier at the gateway issuing instead a temporary user identifier, classified in class 709, subclass 227.
- III. Claims 17-24 are drawn to storing a dynamic and a static profile. The dynamic profile can change according to location and/or time but contains no user identification, while the static profile contains the user identification in class 709, subclass 219.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombinations as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations ((MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the information requested is based on the speed of the mobile device does not require the temporary user identifier.

The subcombination has separate utility such as a guest in a hotel looking for the nearest restaurant without the service provider knowing the identity of the requester.

Inventions III and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case invention III is drawn to storing a dynamic and a static profile. The dynamic profile can change according to location and/or time but contains no user identification, while the static profile contains the user identification. Invention I is drawn to location dependent services. The speed of the mobile is considered in addition to position in providing the necessary information has separate utility such as providing information, from a request, for a restaurant in the area of the moving vehicle. See MPEP § 806.05(d).

Inventions III and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case invention III is drawn to storing a dynamic and a static profile. The dynamic profile can change according to location and/or time but contains no user identification, while the static profile contains the user identification. Invention II is drawn to anonymity of user. Withholding the user identifier at the gateway issuing instead a temporary user identifier has separate utility such as the purchase of a ticket or commodity to the mobile terminal without identifying the user. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143)

In accordance with 35 U.S.C 133, a shortened statutory period of one month(not less than 30 day) is hereby set forth to this Office Action. See also MPEP 710.02(b).
